

Fliplet Makes Apps Easy

Fliplet offers a rapid, secure and cost effective way for anyone to create and share enterprise mobile apps with colleagues and customers.

No coding or design skills are required.

Benefits

- **Easy.** Anyone can create apps.
- **Fast.** Apps take only a few hours to create.
- **Cost-effective.** Create apps for a fraction of the cost of traditional app development.
- **Impressive.** Ensure professional-looking apps that adhere to brand guidelines.
- **Scalable.** Platform can scale across your business.
- **Secure.** Apps integrate with existing mobile security solutions.
- **Flexible.** Extend apps to meet your unique needs and connect with your backend systems.

“Fliplet is not only easy to use, it’s also helped us save time. Our sales people are more efficient as they don’t have to waste time looking for information and we save time as we don’t have to keep answering the same questions, we can just point them towards the app.”

**Kristin Montag, Chief Product Officer,
Cortado Mobile Solutions GmbH**

How we make apps easy

No programming required

Fliplet apps can be created and maintained by people without programming skills such as members of the marketing, sales, finance, HR, product and project management teams. It takes approximately 15 minutes to learn the system and not much longer to have the first app published on your device.

Operating systems & devices

Fliplet apps work on devices running Apple® iOS 6 or later and Android™ 4.2 and later. By default Fliplet apps work on iPad, iPhone, iPod, Android tablets and smartphones. Apps are automatically updated to respond to the release of new operating systems so you can rest easy in the knowledge that your apps will work whenever required.

Deployment

Fliplet offers you a flexible choice of deployment options. Apps can be instantly viewed on mobile devices via our secure Fliplet Viewer® app and access controlled through our account management features. Alternatively apps can be deployed via public app stores such as Google Play or iOS App Store or via internal or Enterprise App Stores including those provided by MDM solutions

Security & hosting

Fliplet can integrate with existing mobile security software to conform to internal corporate security requirements. Flexible cloud and hosting options allow users to secure their data based on their needs.

Customisation

Fliplet offers a strong set of base features and customisation options. If required the platform can be further extended to integrate with backend systems and databases as well as to respond to unique needs.
